

MABI Bandblitz

Cap strip production

MABI®

Lightning fast production of cap straps with the MABI Bandblitz

- ✔ Easy changing of the band
- ✔ Simple MABI operation
- ✔ Simultaneous acceptance of two rolls of sheet metal, aluminum and zinc

Everyone knows: For a half cap, you need 1½ minutes with a MABI cap line. So far so good, but how long do you need for the production and adjustment of the straps? Many say far too long.

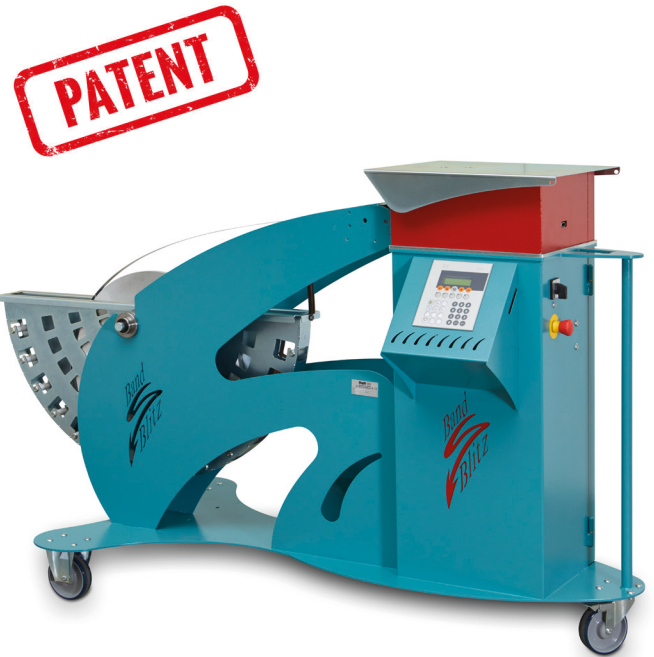

MABI's solution: MABI Bandblitz

The Bandblitz is designed for the production of cap straps. It has an unwinding device which cuts the cap strap to the desired length. This unwinding device can take two straps at once.

It is a simple device, yet one that brings great benefits. The advantage lies in the fact that the cap closures are already punched out. Therefore, there is no longer any need for time-consuming adjustment of the cap straps.

Aluminum + Zinc	0.5 - 1.0 mm
Stainless steel	0.5 - 0.8 mm
Metal strip width	12 mm - 20 mm
Max. Coil outside Ø	940mm

Simultaneous acceptance of two rolls of sheet metal

Mobile, thanks to integrated wheels
